Continuous Row with Master/ Satellite Installation Instructions

With master/satellite, a multi-lamp ballast in every other fixture reduces the total number of ballasts required. Each satellite fixture is connected by thru-wiring to an adjacent master fixture. Fixtures are joined together in a continuous row and serviced by one power feed. Thru-wiring is provided, with quick-wire connectors and knock-outs at fixture ends.

! DRYWALL

If installing in DRYWALL, some steps on this instruction sheet may not be applicable. Refer to separate drywall instruction sheet.

1 Bend mounting tab

Bend out mounting tab 90 degrees on each corner.

2 Adjust height of tab

Use side cutters to adjust each tab to height of T-grid.

3 Lay fixture into T-grid

Lay fixture into T-grid.

4 Bend tabs flush

Bend tabs flush against T-grid in order to clear corner for ceiling tile.

5 Fasten fixture to T-grid

Use a #8x1/4" sheet metal screw to fasten fixture to T-grid and use a hanger wire to tie off appropriately in accordance with local building codes (screws and hanger wires supplied by others).

6 Attach adjacent fixtures

Remove connecting knock-outs and attach adjacent master and satellite fixtures to the T-grid following steps 1-5. Place a 1/2" nipple through the knock-out hole between the fixtures. Fasten with a 1/2" NPT lock nut (nipple and lock nut supplied by others).

7 Electrical connections between fixtures

Feed the wires through the nipple and make all the electrical connections between the fixtures following the correct wiring color code. Attach the wiring access cover plates.

8 Electrical connection to the first fixture

Ensure that the wiring in the last fixture in the row is properly terminated. Then make all electrical connections to the first fixture in the row. Attach the wiring access cover plate.

ATTENTION: Install in accordance with national and local building and electrical codes.
